So, what is Brainville Statistics? An extension of Brainville.com where you can drill down in the statistics of your choice and read articles about the freelance and consulting industry. Instead of a static quarterly report we will update our statistics monthly and give you access to them directly.

And now, the Nordic market overview Q3 2022

The number of assignments during Q3 2022 was almost comparable to Q3 2021, which means, still, a high level. In

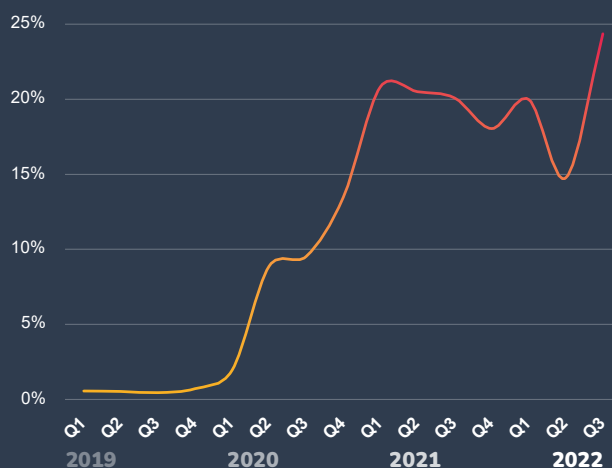

September we started noticing a clear decline and it seems to continue in Q4.

Assignments allowing remote work increased, from 15 % to 24 % in Q3. That's a number we didn't even see during the pandemic.

- Assignments allowing remote work increased, from 15 % to 24 % in Q3. That's a number we didn't even see during

the pandemic. One of the reasons for the increase can be a maturing market where remote work has been normalized, despite what Elon Musk seems to think, says Manuel de Verdier, CEO of Brainville.

Assignments allowing remote work

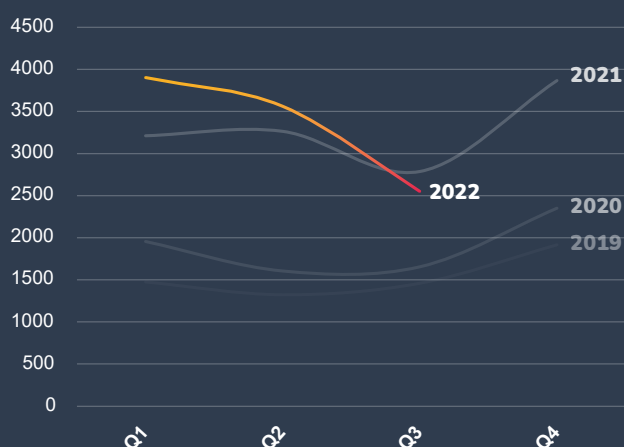

The number of available consultants was mostly flat during Q3 but started increasing and has kept increasing steadily since. In Q4 we've almost reached the levels of 2020. We've also seen a sharp increase in the number of applications that are sent.

When it comes to rates, suppliers have kept increasing them but to a moderate extent. Buyers have started decreasing them, but just slightly too. Though this is a change from previous quarters where buyers had to increase the rates due to the simple fact that the demand was higher than the supply.

- Given the negative trend for assignments and rates, and the positive trends for available consultants and applications sent and given the fact that we can glance at Q4, combined with the state of the economy in general we're expecting a slight decline in the market during Q4, says Manuel de Verdier.
